

DRM-Free

This namespace aims to provide linux comparability tips for running DRM-Free games 100% DRM Free (i.e. not on the steam platform and only on wine). There are a couple of self-imposed constraints (that are pointed out in each article for a game if violated).

- No External Launchers (ie. no steam/lutris)
- No DRM-Circumventing Libraries (i.e. no goldberg)
- As close to stock wine as possible (i.e. no dxdk unless unplayable without)

I will make note of steam/proton compatibility if using the methods above leaves a distinguishable difference between the two.

If you have compatibility notes or are playing games with compatibility tools outside steam I would love to have you contribute to this wiki.

Working Games

- [Zero Ranger](#)

Planned Games

- N/A (yet anyway)
